

Pattern template — set-in sleeve

Sleeve head and cuff template with notch placement for walking the armhole.

10 cm scale check — measure after printing

How to use this template

- Walk the sleeve head against front and back armhole before cutting.
- Keep 1.0 – 1.5 cm total ease in the sleeve head for woven shirts.
- Single notch to the front, double notch to the back — always.
- Re-check the cuff girth against the size chart, not the block.
